HORTICULTURE LED luminaire GL-60

LED lighting is changing the face of greenhouse horticulture with the potential applications increasing at a phenomenal rate. The main benefit of LEDs over existing HPS systems is the efficiency with which electricity is converted into light, making LEDs more energy-efficient. LEDs also give the user more application options thanks to continuously variable dimmability and the endless variation in colour spectra. Finally, LEDs have the great advantage that they emit less heat, making it easier to control the greenhouse temperature.

Applications

- Commercial greenhouses
- Garden centers
- Research facilities
- Universities

Application Guide

All spectra are available in all luminaires. Through conducting more than 400 trials we have collected data on optimal light intensities in each growth phase for most commonly cultivated plants worldwide. We thus advise our customers on the spectrum and luminaire selection for their particular application.
